School of Medicine

Admission Policy

The basic philosophy of the School of Medicine is to learn from patients and to give back to patients medical care founded on this learning and research. This includes the idea that medical professionals should give their whole life to ameliorating the suffering of sick people and so contribute to human health and welfare. Based on this philosophy, the School of Medicine seeks to foster not only the knowledge and skills of medical and nursing science, but also a deep regard for human dignity and broad-minded humanity. The school aims to develop medical professionals with deep insight and consciousness of bioethics and the sanctity of life. Moreover, in order to acquire an attitude of lifelong learning in the continually developing field of medical science and care, the school focuses on education based on exploring issues in small groups. We aim to foster people who are capable of contributing widely to national health, medicine and welfare, including regional healthcare. In addition to general admission, we have adopted a variety of admission methods, including recommendations from schools and self nomination. Therefore, we seek students with the following qualities for the School of Medicine.

(Knowledge and Understanding, Thinking and Judgment)
1. Qualified students will have the academic ability required for study after enrollment.

(Interest, Motivation and Attitude)
1. Sympathy to humanity and high ethical standards with regard to life.
2. A high degree of motivation and interest in medical science and health care, with responsibility and enthusiasm for contributing in this area.
3. Motivation to undertake a lifelong self-development, self-learning, and ongoing commitment to promoting health.

(Skills and Expression)
1. Humanity, and an adjustable and cooperative spirit, with the ability to maintain good relationships with the people around them.
2. Responsibility for one's own thoughts and actions, and the ability to demonstrate this clearly to others.
