Program for Nursing and Health Sciences

● Admission Policy
1. Those who actively wish to obtain and implement knowledge and skills in specialized areas of clinical nursing and nursing science.
2. Those who want to contribute to the development of nursing science by proactive, constructive study in order to improve their practical, educational and research abilities.
3. Those who aim to conduct ongoing independent research in nursing science.
4. Those who aim to be able to contribute to society through their ability to play a central role in a medical team, in health, medicine, or welfare, in cooperation with other team members.
5. Those with a deep love for and insight of people with the potential for growth as a health supporter.

● Curriculum Policy
The course is comprised of 2 common subjects, Nursing for Community Health Systems and Basic/Clinical Nursing Science. Students can develop knowledge and research ability in each specialist area under the guidance of the teaching staff. Furthermore, students are also allowed to choose elective subjects in related areas and advanced nursing science based on their individual needs. Daytime and nighttime courses are available to enable mature students who are already working in nursing to complete the course while they work.

● Diploma Policy
1. Acquire highly specialized knowledge in a specialized field, and knowledge of nursing theory.
2. Be able to find the solution for on-site issues through scientific/logical thinking.
3. Be able to improve one's own capabilities in clinical nursing, educational guidance and research.
4. Be able to conduct and present research on on-site issues.
5. As a leader of a medical team, be able to understand the roles of each team member and promote their cooperation/collaboration.
